

Technologist Identification

Purpose: To establish guidelines to ensure clear indication of which technologist is responsible for performing the examination.

Policy: Magnetic Resonance

1. The technologist at the console performing the exam must be readily identified on every exam. This includes exams done without and/or with contrast.
2. Identification will be accomplished by the technologist entering their initials used for RIS tracking on each procedure.
3. During the input of the patient information, prior to scanning, the initials will be entered upon set up of the localizer in the box labeled series description.
4. Click inside box and type initials in front of series description followed by a / to separate initials from actual series description.
5. This location must also be used to indicate the patient's EGFR.
